<sup>a</sup> Species classified as smoke stimulated if emergence was significantly greater in the smoke than the control treatment at  $P < 0.05$  (two-tailed  $t$  tests).

<sup>b</sup> Mean ± 1 SD.

<sup>c</sup> Mean weight of individual seeds;  $n = 50$  for seeds averaging  $\geq 0.5$  mg and  $n = 100$  for seeds averaging  $< 0.5$  mg.
